

Increase your productivity with a device designed for the task!

Power through your scanning in a fraction of the time of multifunction printers with scanners from Kodak Alaris

Scanning documents, capturing information, and extracting data is a complex process. Multifunction devices simply are not equipped for the task. Only a true scanner can provide the speed, built-in intelligence, and image clarity you need to complete your scanning projects quickly, efficiently, and accurately.

Get better images faster

Save time and produce superior results with features designed with productivity in mind.

- Move through projects quickly and on to other tasks with high scanning speeds that let you tackle towering stacks of documents with ease
- Cut processing time in half for two-sided documents with single-pass duplex that scans front and back simultaneously
- Get clean, crisp images that are ideal for use in other processes with automatic image deskewing, despeckling, and cropping
- Produce smaller file sizes that are more easily shared and stored with functionality that removes black scanned paper holes and other artifacts
- Scan in color as quickly as in black and white
- Have the flexibility to save information in a wide range of file types

- Easily move data to any of a number of repositories (**SharePoint**, for example) with time-saving integrations
- Give users the choice of dual output streams like color and mono, raw and compressed, with no loss in speed

Smart features for streamlined scanning

Kodak Scanners* employ advanced intelligence that lets them do more with less user interaction.

- Program up to nine one-touch tasks with Smart Touch technology
- Save desk space with an integrated flatbed or a detachable accessory
- Simplify indexing with word search capability
